EDUCATION

SRKR Engineering College, Andhra Pradesh **Aug 2023 – May 2027**
Bachelor of Technology in Computer Science and Information Technology *CGPA: 8.31*

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Cloud Computing, Computer Networks

EXPERIENCE

Software Development Intern — Bluconnect AI India Pvt. Ltd. *Jan 2026 – Aug 2026*

- Eliminated the need to manually write and insert tools/workflows into the database via scripts by designing a manual creation UI, allowing admins to build and edit tools and workflows directly through the interface — reducing a script-and-DB-dependent process to a self-service, no-code workflow.
- **Cut workflow and tool creation time from 1–2 weeks** by integrating **Claude's Agent SDK** to read the existing codebase and auto-generate tools from a plain-language description — turning a multi-week manual process into a self-service one.
- **Removed engineering dependency for admins** by building an automation builder UI in the admin dashboard, enabling non-technical users to create entities, templates, tools, and workflows just by describing what they needed.
- Re-architected the **tool-generation pipeline** from a synchronous, request-blocking process to an asynchronous, queue-based execution model by implementing background jobs with **PG Boss**, decoupling long-running AI generation tasks from the request-response cycle and eliminating timeout failures for variable-length generation jobs**.**
- Built a form engine that renders field sets at runtime from a JSON schema returned by the backend — text, dropdowns, repeating sections, nested groups — eliminating hardcoded layouts per tool/workflow, with three option-resolution strategies (inline static, eager backend-fetch, on-demand live fetch) so large datasets like 100,000+ BOQ items load only when a field is opened

PROJECTS

REVA AI *(TypeScript, React, Supabase, Azure OpenAI, AWS)* GitHub

- Architected a multilingual complaint reporting platform supporting 3+ languages that converts voice-based complaints into structured records using **speech-to-text and prompt-engineered LLM extraction** with schema-enforced output.
- Solved auto location-based incident routing using **PostGIS**, automatically identifying and assigning the appropriate police jurisdiction across 50+ zones.
- Orchestrated Aadhaar-based OTP verification, JWT authentication, TPIN verification, and rate limiting for secure user access and abuse prevention.
- Delivered an **evidence intelligence pipeline** using image analysis by azure and perceptual hashing, cutting duplicate complaint submissions by ~35%.

InsightX (*Python, FastAPI, PostgreSQL, GCP (Document AI, Vertex AI), React, TypeScript)* GitHub

- Built an AI-driven document processing system for Kochi Metro Rail Limited (KMRL), enabling multi-format ingestion of PDFs, Word files, and scanned images with English and Malayalam OCR support.
- Engineered role-based AI summarization with automated deadline and key-action extraction, plus automatic cross-linking of related documents across compliance, operational, and technical teams.
- Delivered a secure React dashboard with JWT authentication, voice/text search, and automated compliance alerts with email notifications, handling 100+ documents per day.

SKILLS

- **Languages:** Python, TypeScript, JavaScript, Java
- **AI/LLM:** OpenAI, Claude Agent SDK, Gemini AI Playground
- **Frameworks:** Node.js, Express.js, NestJS, ReactJS
- **Databases:** PostgreSQL, MongoDB, MySQL
- **Cloud & DevOps:** GCP, Supabase, Docker
- **Tools:** Git, Postman, Temporal, Thunder Client, GitHub

ACHIEVEMENTS

- UDHBAV Hackathon 2026: Best Implementation Award | Team Leader
- Smart India Hackathon 2025 (Internal): 2nd Place among 150+ Teams | Team Member
